

Newbie Web Automation

Automate logging into multiple Website Accounts – You can easily access all your website accounts using a single username and password using Newbie. No need to memorize or write down all those usernames and passwords to each individual website.

Manipulate web pages to extract data – Extract search results from Google, Amazon, Yahoo and other major websites. Export the data to Excel or directly to a Database such as Access, SQL Server or Oracle.

Access Newbie on your favorite Web Browser – You can run Newbie Web Automation directly in Internet Explorer and Mozilla Firefox. Newbie also comes with its own built in web browser.

Automate daily web tasks – Automate your daily web tasks such as downloading reports from the web, checking transactions and navigating to your favorite websites.

Create scripts to test websites – Create simple to complex Newbie Scripts that performs repetitive testing of websites. Fill forms, test web controls, submit data and navigate web pages are some of the actions that can be automated using Newbie.

Newbie Web Recorder

Record your Web Actions and generate Newbie Scripts - You can generate Newbie Scripts by using the Web Recorder to record your web actions.

Conveniently run Newbie Scripts directly in Internet Explorer – Once scripts have been generated by the Web Recorder, you can replay those scripts over and over on Internet Explorer.

Access Newbie Scripts using a TreeView Interface on Internet Explorer – Scripts are organized in a Treeview manner for easy access and navigation.

Newbie Task Manager

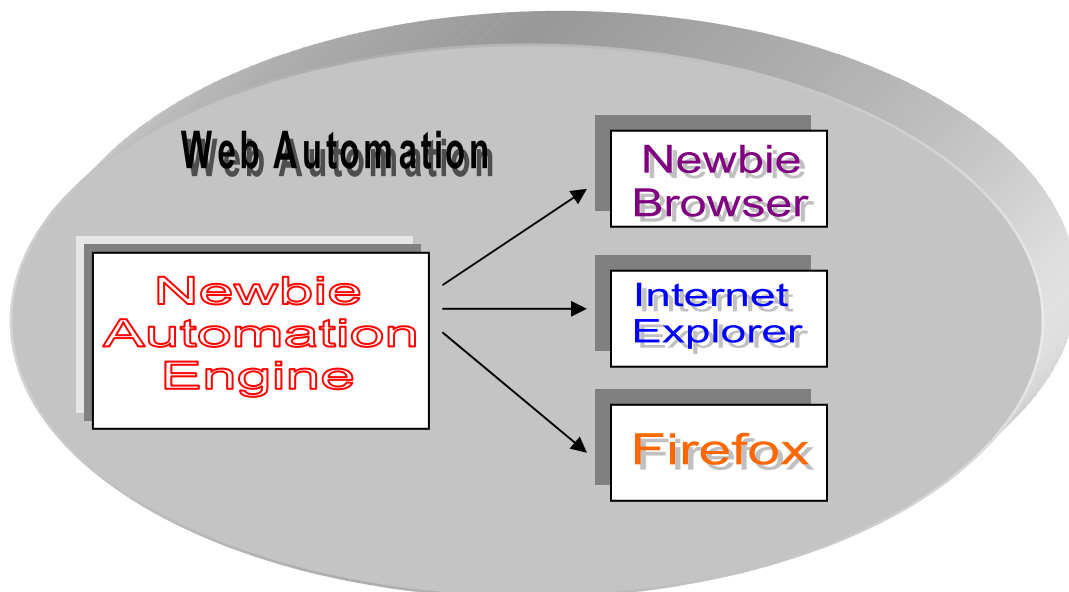

Schedule and execute an assortment of Computer Tasks – The Task Manager provides many tasks that can be scheduled and executed one time, periodically or triggered by system events.

Create a combination of Tasks to be performed together and schedule them for execution – You can combine multiple tasks and execute them sequentially one after the other.

Backup files and directories on a periodic basis – Tasks can be created to backup files, archive email and move files on the network.

Record macros and schedule playback – Record keystroke sequences, mouse movements and clicks done on any Windows application. Replay them on a scheduled basis.

Execute Newbie Scripts within Task Manager – Newbie Scripts that perform any web action can be scheduled and executed from within Task Manager.

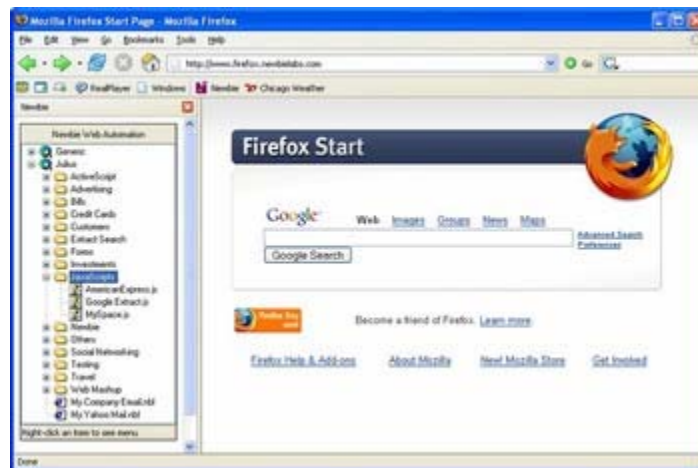

Newbie Web Automation comes with its own web browser

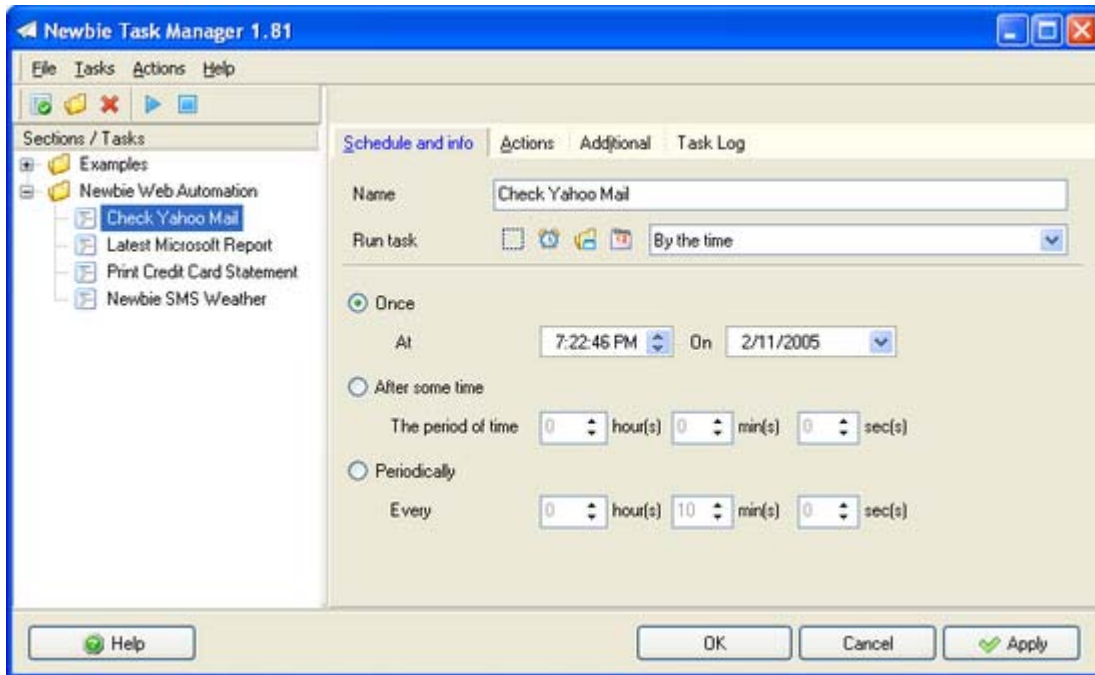

Newbie Plugin for Internet Explorer

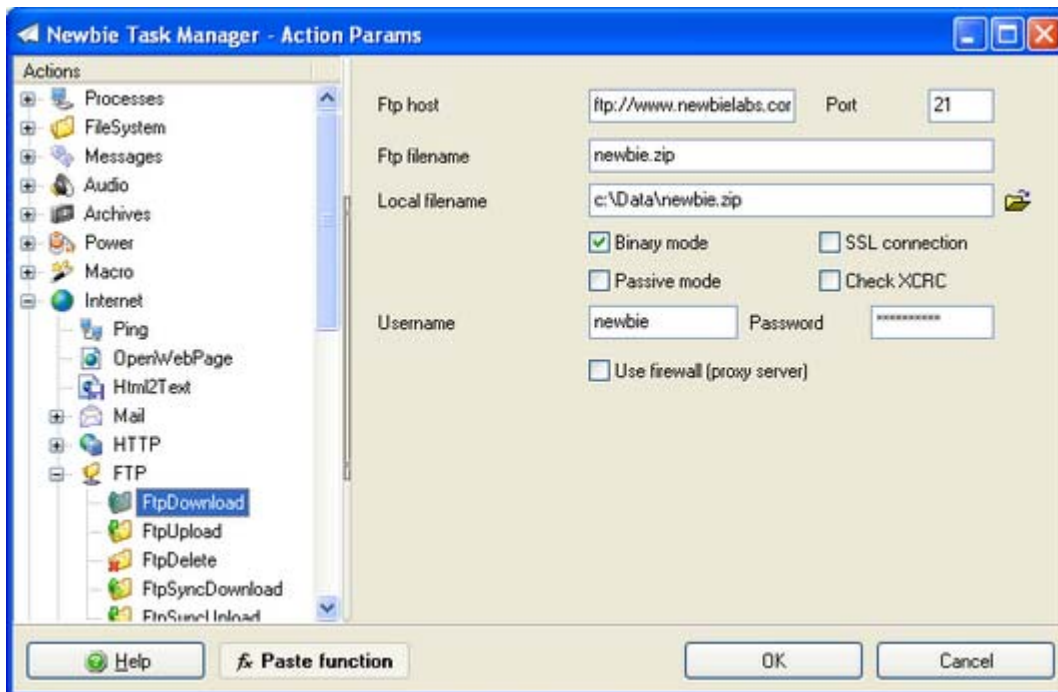

Newbie Plugin for Mozilla Firefox

Schedule Tasks and Scripts using Newbie Task Manager

Record Web Actions Using Newbie Web Recorder

Newbie comes with a Script Editor and Compiler to create scripts.

```
Newbie Script Editor - Google Export Links.nbs
Script Edit Action Debug
10 const
11   ExportFile = 'c:\temp\google.xls';
12   FFExportFile = 'c:\\temp\\google.xls';
13   NumOfPages = 20;
14
15 var
16   KeywordStr : string;
17   nCount : integer;
18
19 procedure OnDocumentComplete(URL : string);
20 begin
21   if URL = 'http://www.google.com/' then
22     begin
23       Fill('q', KeywordStr);
24       ClickButton('btnG');
25     end;
26   if IsPartOf('http://www.google.com/search?', URL) then
27     begin
28       if (nCount <= NumOfPages) then
29         begin
30           if (GetExecuteBrowser = 'FIREFOX') then
31             ExtractHyperLinks(FFExportFile, KeywordStr, 'class=1')
32           else
33             ExtractHyperLinks(ExportFile, KeywordStr, 'class=1');
34
Compiling...
Compiled successfully
Line 23: 17
```

The Script Debugger is available only with the purchase of Newbie Automation Suite.
